

#6576

INSTALLATION AND OPERATION INSTRUCTION FOR COLORFUL FOUNTAIN

NOTES:

Face the front of the Fountain towards the pool and screw the both ends of aluminum tube into the white fitting.

Some leaking may occur in and around the Fountain, this is normal.

DO NOT SUBMERGE Fountain in water.

Colorful Lights may not be visible during daylight hours.

DO NOT connect to booster pump.

Installation:

1. Locate the pool returns under the water's surface. (For most in-ground pools, there are multiple pool returns.) (img. 1)
2. Screw the fitting to the return. (Fits a 1.5" threaded pool return inlet) Locate the triangle relief holes upside down. (img. 2)
3. Turn the flow-control collar to the OPEN position. (img. 3)
4. Connect the aluminum tube to the elbow fitting and screw the nut close. (img. 4)
5. Connect the Fountain to the other end of the aluminum tube and screw the nut close.
6. Turn on the pool pump.

ADJUSTMENTS:

If the water spray is not at the desired height or the lights are not on, the water pressure/flow is probably too low.

1. Slowly screw the follow-control collar until the water spray is at desired height.
2. If the results are not satisfactory, please insert a closed plug into the other returns until the water spray achieved desired height. As to above-ground pool, if the water pressure/flow is still too low after you operate as above mentioned, maybe you have to change pump with bigger horse power.

If the water spray is too high, the water pressure/flow will need to be reduced.

1. Turn flow-control collar loose until the triangle relief hole is full open.
2. Please open other returns in the pool.
3. If the results are not satisfactory, please adjust the return valve of pump.
